

Student submission instructions

Submit a compact simulator model generated from your DeepRacer-for-Cloud training run.

Create the submission

```
./cedc_package_model.sh /path/to/your/model cedc_submission.tar.gz
```

The default **auto** mode tries the best checkpoint recorded in **deeperacer_checkpoints.json**, then safe fallbacks.

To explicitly submit the latest complete checkpoint:

```
./cedc_package_model.sh /path/to/your/model cedc_submission.tar.gz --  
checkpoint latest
```

To submit a particular iteration:

```
./cedc_package_model.sh /path/to/your/model cedc_submission.tar.gz --  
checkpoint 50
```

Validate it:

```
python3 validate_cedc_bundle.py cedc_submission.tar.gz
```

Upload **only** **cedc_submission.tar.gz** in the competition portal. Do not upload the expanded training **model/** directory and do not upload DRfC's physical-car **outputs/model.tar.gz** containing only **agent/model.pb**.
